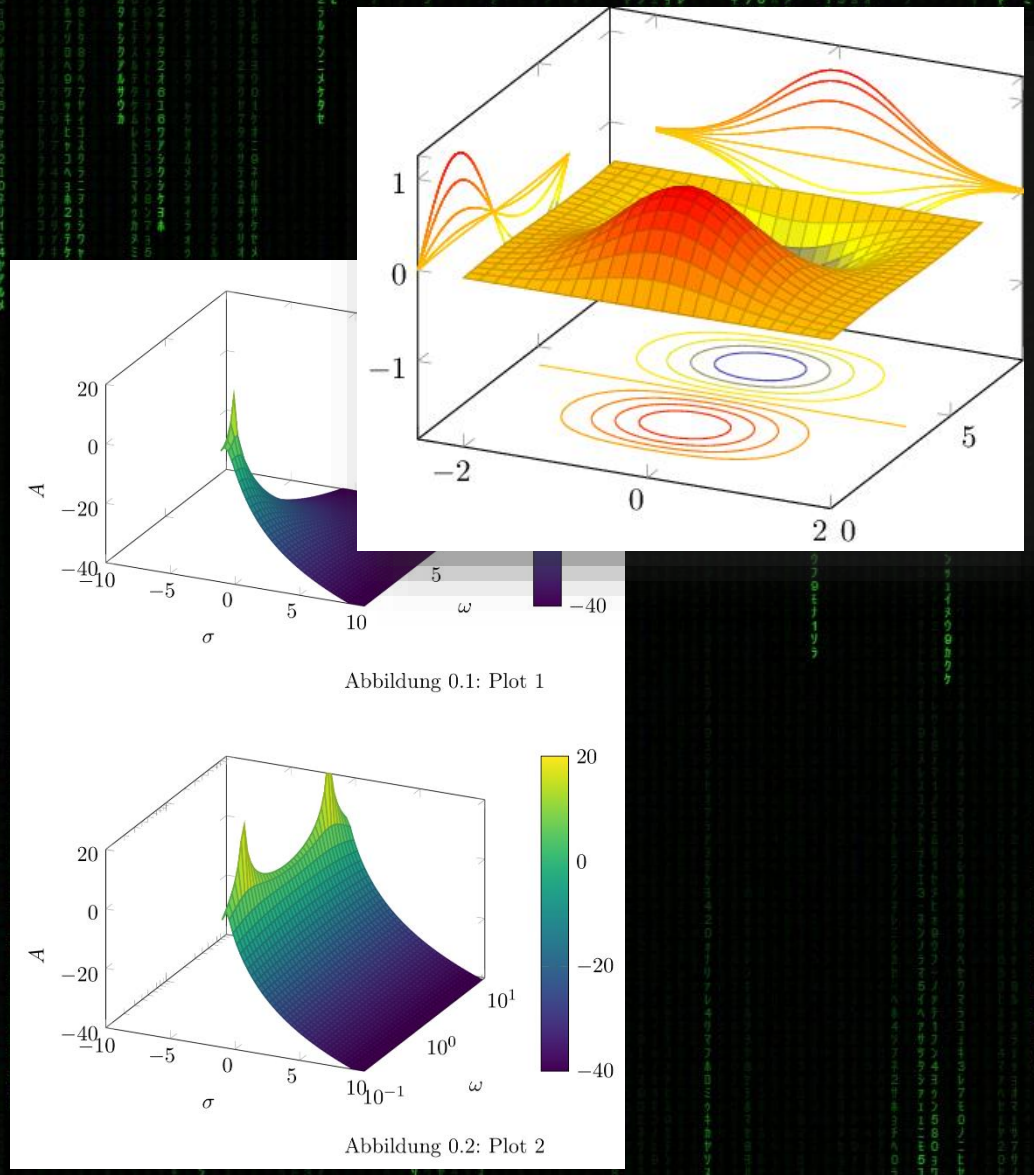
E-Mail: giovanninicola.daloisio01@universitadipavia.it

Pgfplots package

- The pgfplots package, which is based on TikZ, is a powerful visualization tool and ideal for creating scientific/technical graphics.
- The basic idea is that you provide the input data/formula and pgfplots does the rest.
- Usage:

```
\usepackage{pgfplots}
\pgfplotsset{width=10cm,compat=1.9}
```

- This changes the size of each pgfplot figure to 10 centimeters, which is huge; you may use different units (pt, mm, in). The compat parameter is for the code to work on the package version 1.9 or later.



First basic example

```
\documentclass{article}
\usepackage[margin=0.25in]{geometry}
\usepackage{pgfplots}
\pgfplotsset{width=10cm,compat=1.9}
\usepgfplotslibrary{external}
\tikzexternalize

\begin{document}

% 2D plot

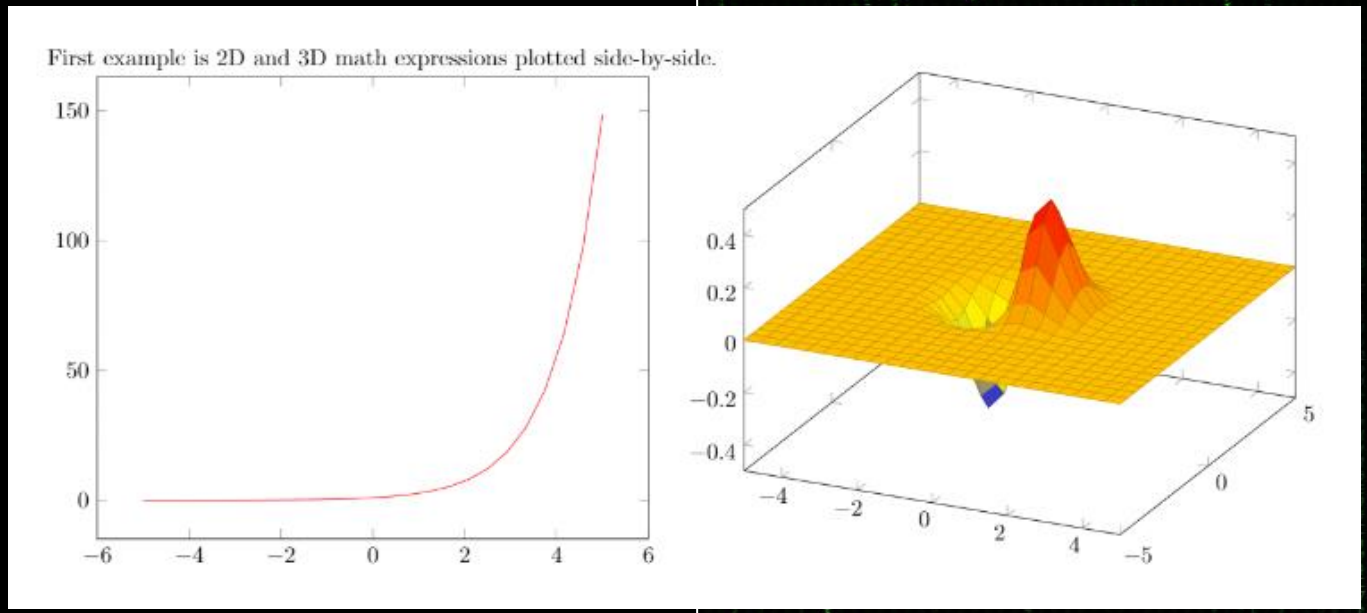
\begin{tikzpicture}
     \begin{axis}
          \addplot[color=red]{exp(x)};
     \end{axis}
\end{tikzpicture}

\hskip 5pt

% 3D plot

\begin{tikzpicture}
     \begin{axis}
          \addplot3[surf,]{exp(-x^2-y^2)*x};
     \end{axis}
\end{tikzpicture}

\end{document}
```



Plotting 2D maps

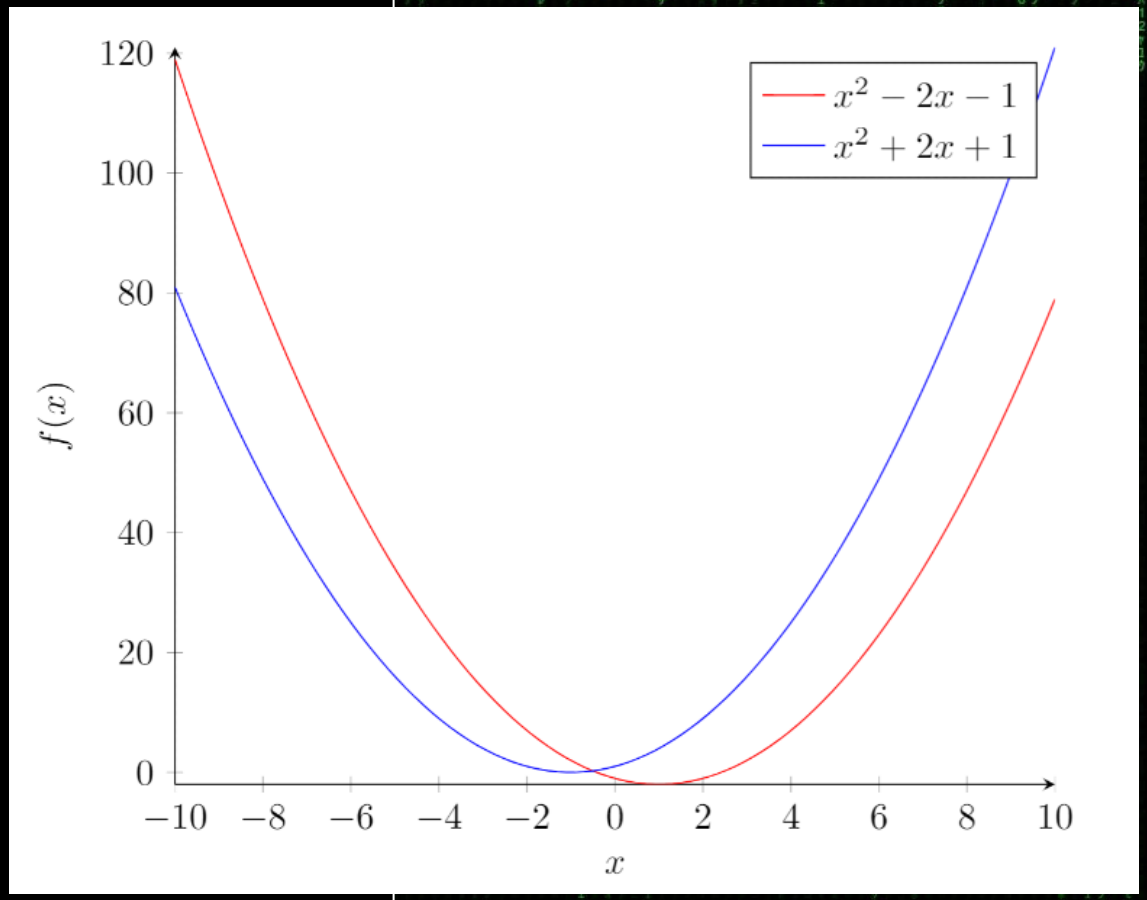
```
\begin{tikzpicture}
    \begin{axis}[
            axis lines = left,
            xlabel = \(x\),
            ylabel = {\(f(x)\)},
        ]

        %Below the red parabola is defined
        \addplot [
            domain=-10:10,
            samples=100,
            color=red,
        ]
        {x^2 - 2*x - 1};

        \addlegendentry{\(x^2 - 2x - 1\)}

        %Here the blue parabola is defined
        \addplot [
            domain=-10:10,
            samples=100,
            color=blue,
            ]
            {x^2 + 2*x + 1};
        \addlegendentry{\(x^2 + 2x + 1\)}

    \end{axis}
\end{tikzpicture}
```

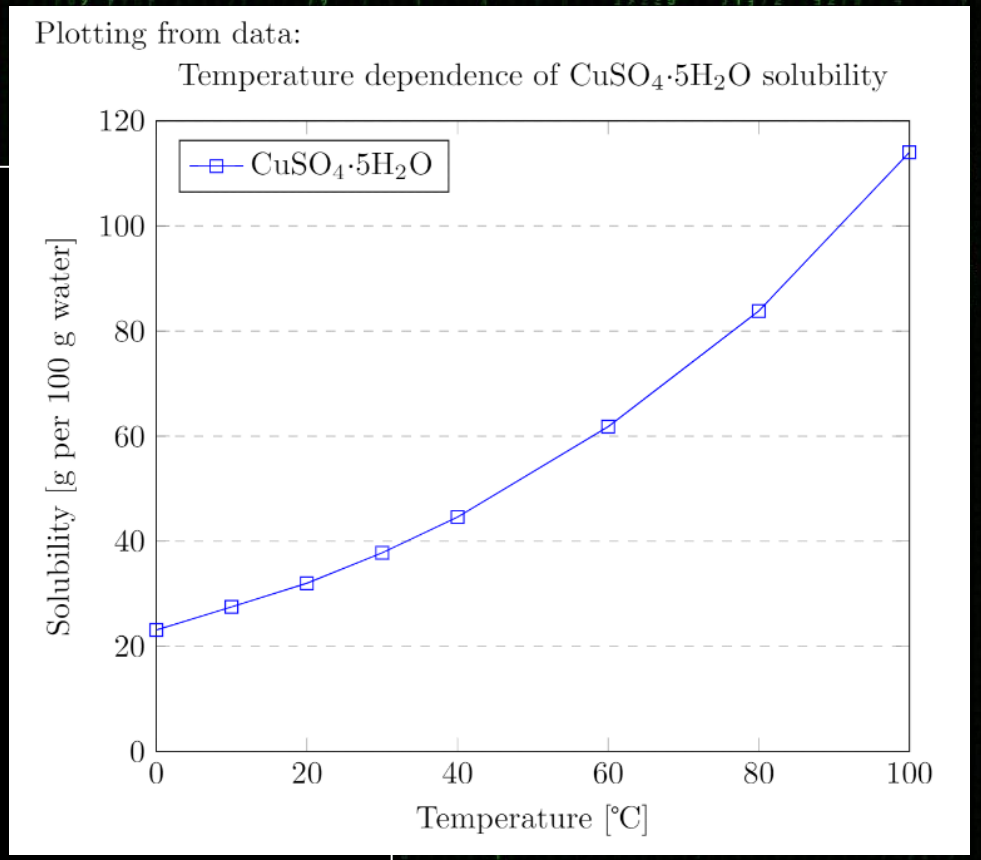


Plotting from data

```
Plotting from data:

\begin{tikzpicture}
    \begin{axis}[
        title={Temperature dependence of
          CuSO\(_4\cdot\)5H\(_2\)O solubility},
        xlabel={Temperature [\textcelsius]},
        ylabel={Solubility [g per 100 g water]},
        xmin=0, xmax=100,
        ymin=0, ymax=120,
        xtick={0,20,40,60,80,100},
        ytick={0,20,40,60,80,100,120},
        legend pos=north west,
        ymajorgrids=true,
        grid style=dashed,
    ]
    \addplot[
        color=blue,
        mark=square,
        ]
        coordinates {
        (0,23.1)(10,27.5)(20,32)(30,37.8)(40,44.6)(60,61.8)(80,83.8)(100,114)
        };
        \legend{CuSO\(_4\cdot\)5H\(_2\)O}

    \end{axis}
\end{tikzpicture}
```



Scatter plots

scattered_example.dat

```

```

```
\begin{tikzpicture}

    \begin{axis}[
        enlargelimits=false,
    ]

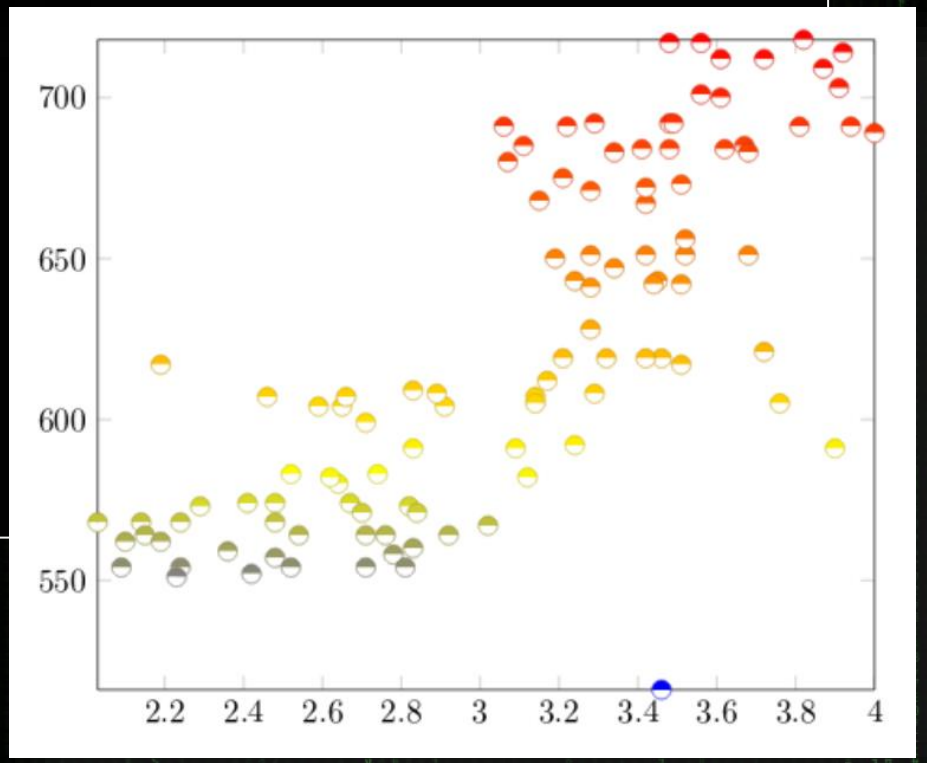
    \addplot+[
        only marks,
        scatter,
        mark=halfcircle*,
        mark size=2.9pt]

    table[meta=ma]

    {scattered_example.dat};

    \end{axis}

\end{tikzpicture}
```



Bar graphs

```
\begin{tikzpicture}

    \begin{axis}[
            x tick label style={
                    /pgf/number format/1000 sep=},
            ylabel=Year,
            enlargelimits=0.05,
            legend style={at={(0.5,-0.1)},
            anchor=north,legend columns=-1},
            ybar interval=0.7,
    ]

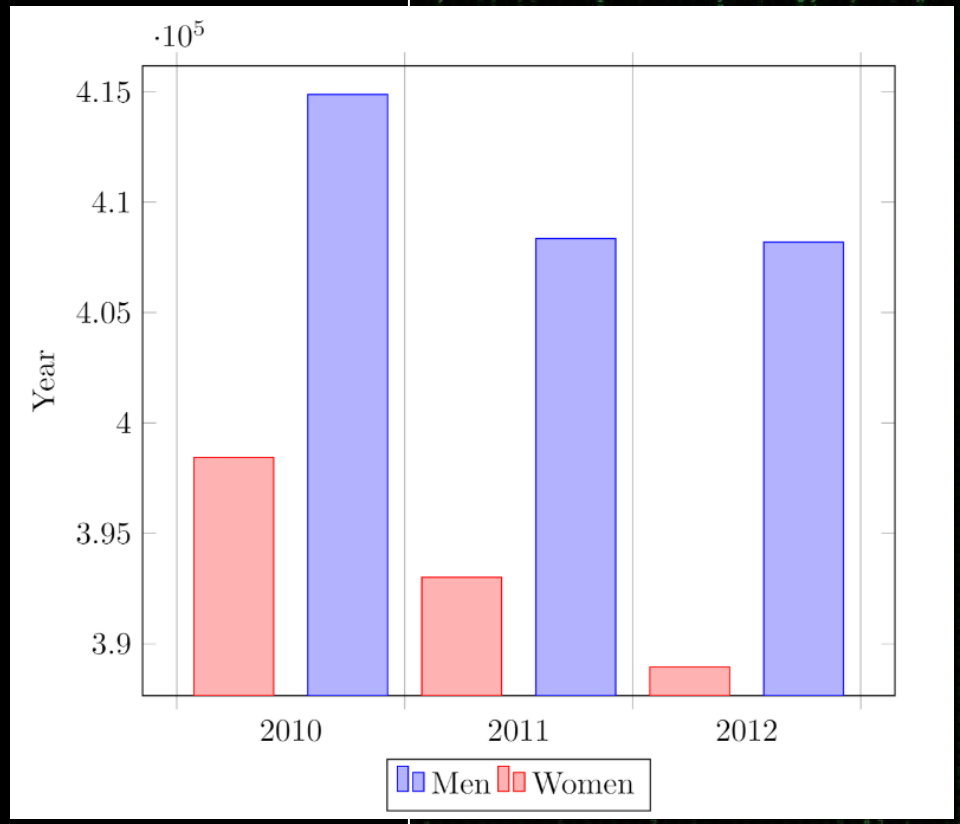
        \addplot
            coordinates {(2012,408184) (2011,408348)
                         (2010,414870) (2009,412156)};

        \addplot
            coordinates {(2012,388950) (2011,393007)
                        (2010,398449) (2009,395972)};

        \legend{Men,Women}

    \end{axis}

\end{tikzpicture}
```



Fancy 3D plots

```
\begin{tikzpicture}

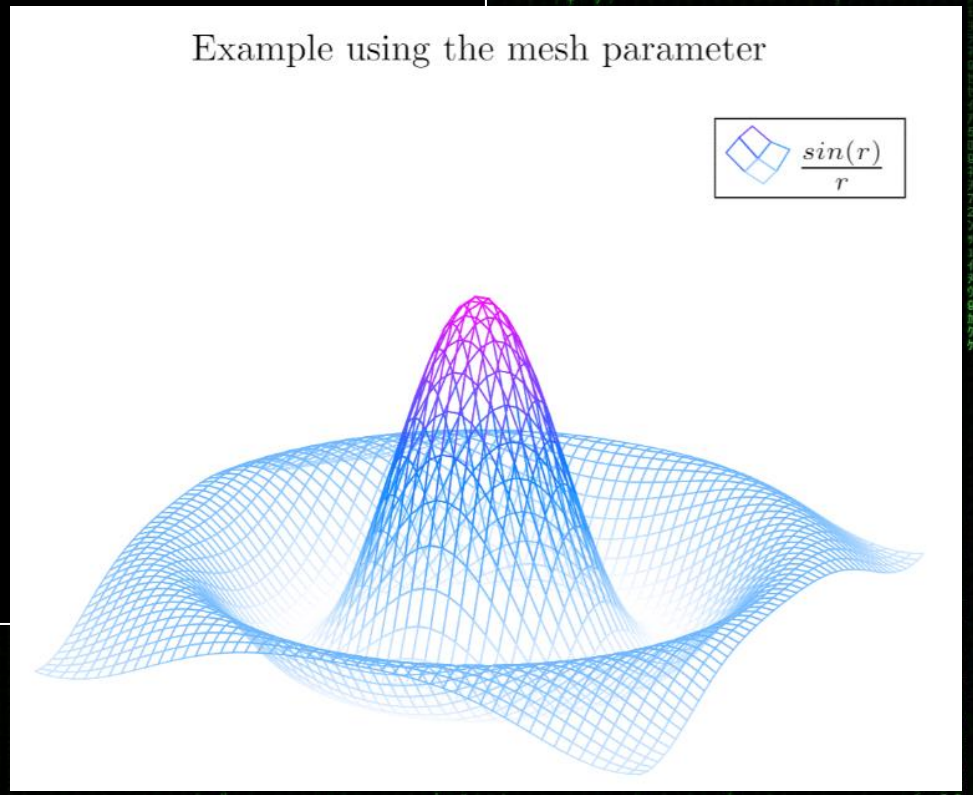
    \begin{axis}[
        title=Example using the mesh parameter,
        hide axis,
        colormap/cool,
    ]

        \addplot3[
            mesh,
            samples=50,
            domain=-8:8,
        ]
        {sin(deg(sqrt(x^2+y^2)))/sqrt(x^2+y^2)};

        \addlegendentry{\(\frac{sin(r)}{r}\)}

    \end{axis}

\end{tikzpicture}
```



Contour plots

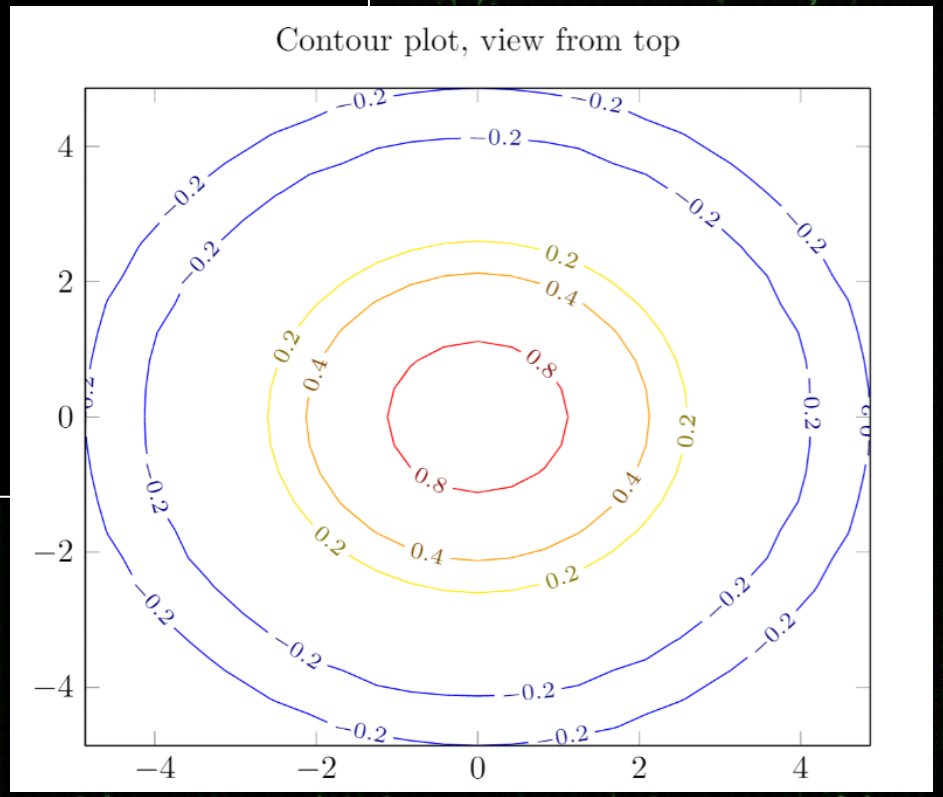
```
\begin{tikzpicture}

    \begin{axis}
    [
        title={Contour plot, view from top},
        view={0}{90}
    ]

    \addplot3[
        contour gnuplot={levels={0.8, 0.4, 0.2, -0.2}}
    ]
    {sin(deg(sqrt(x^2+y^2)))/sqrt(x^2+y^2)};

    \end{axis}

\end{tikzpicture}
```



Plotting a surface from data

```
\begin{tikzpicture}

    \begin{axis}

        \addplot3[
            surf,
        ]

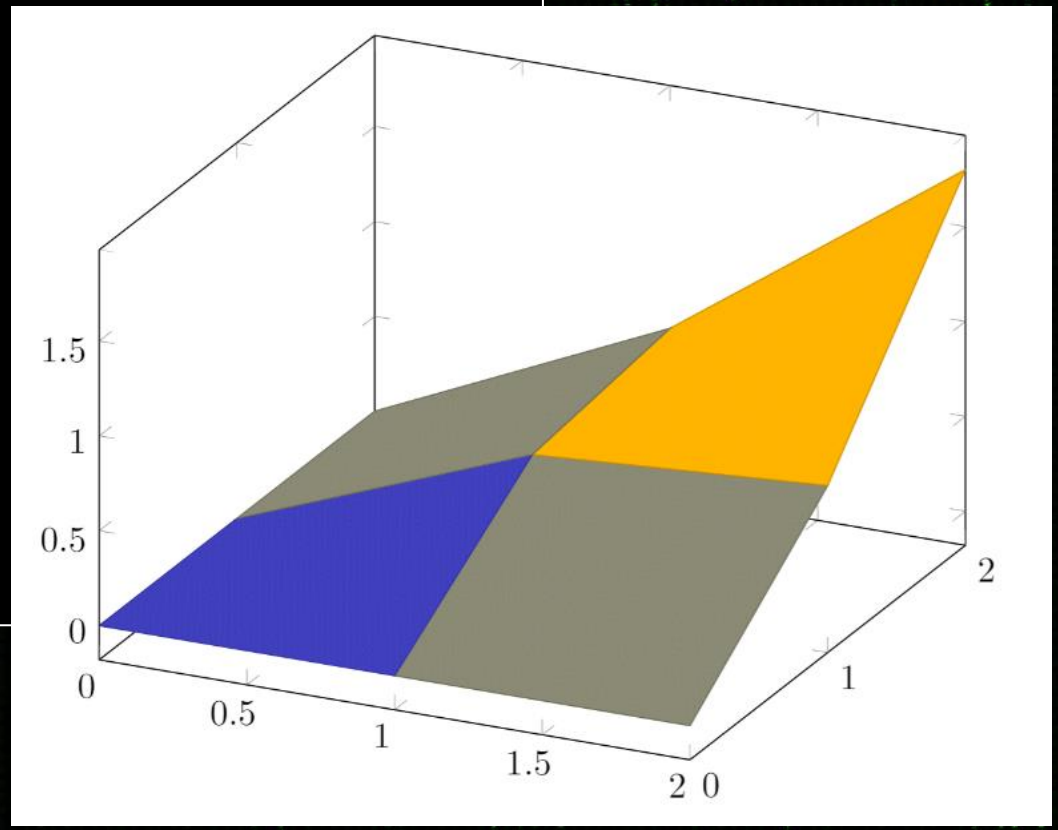
        coordinates {
        (0,0,0) (0,1,0) (0,2,0)

        (1,0,0) (1,1,0.6) (1,2,0.7)

        (2,0,0) (2,1,0.7) (2,2,1.8)
        };

    \end{axis}

\end{tikzpicture}
```



Parametric plot

```
\begin{tikzpicture}

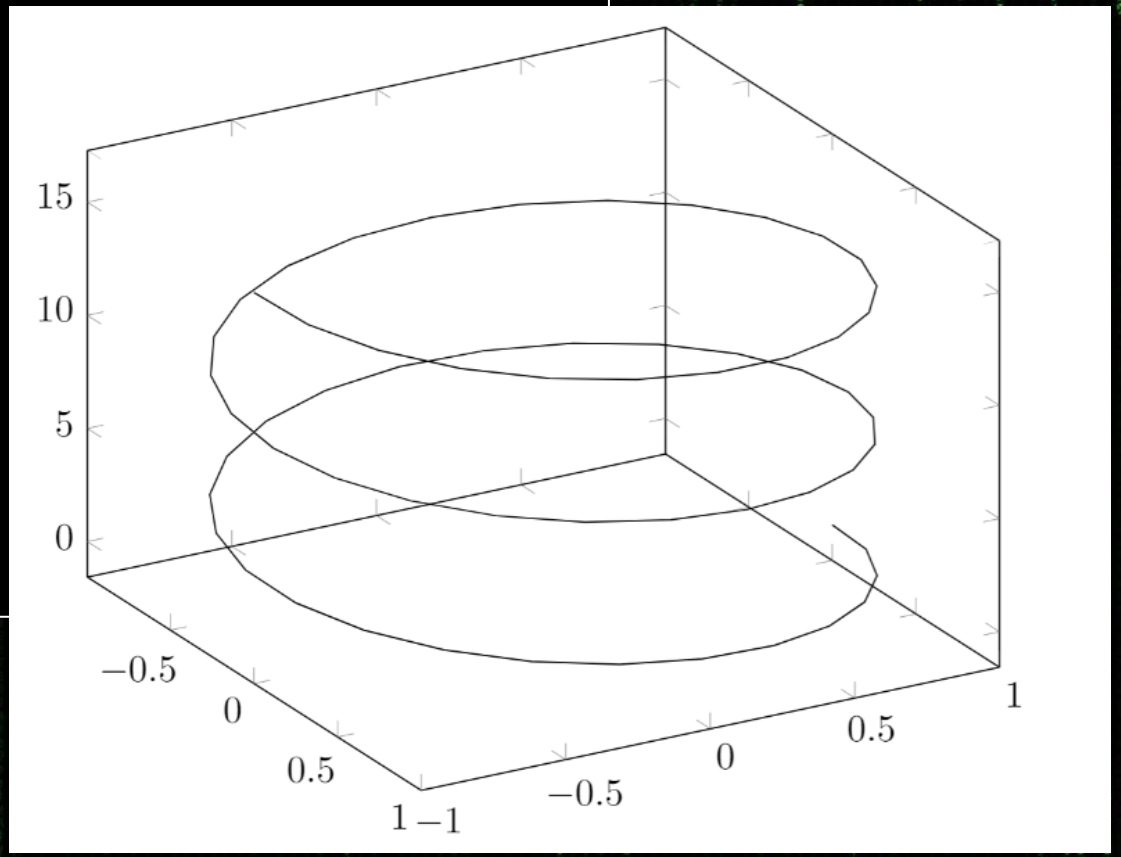
    \begin{axis}[
        view={60}{30},
        ]

          \addplot3[
              domain=0:5*pi,
              samples = 60,
              samples y=0,
          ]

          ({sin(deg(x))},
          {cos(deg(x))},
          {x});

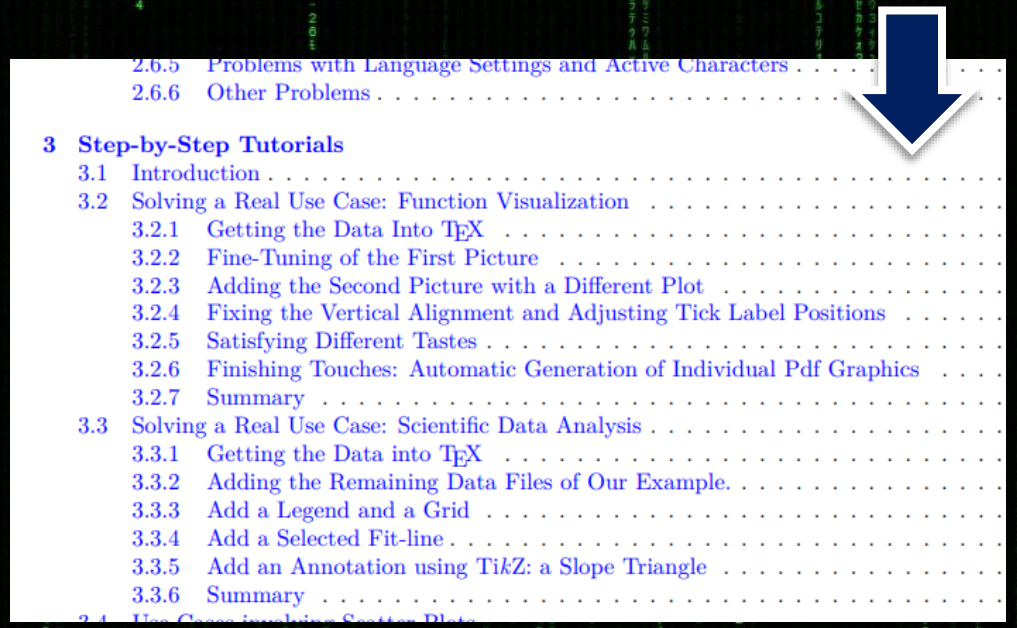
    \end{axis}

\end{tikzpicture}
```



Further information

You can find futher information about this package inside the pgfplots package documentation. Anyway, here you can find some other interesting commands and environments, some of the most used ones.



Command/Option/ Environment	Description	Possible Values
axis	Normal plots with linear scaling	
semilogxaxis	logarithmic scaling of x and normal scaling for y	
semilogyaxis	logarithmic scaling for y and normal scaling for x	
loglogaxis	logarithmic scaling for the x and y axes	
axis lines	changes the way the axes are drawn. default is 'box	box, left, middle, center, right, none
legend pos	position of the legend box	south west, south east, north west, north east, outer north east
mark	type of marks used in data plotting. When a single-character is used, the character appearance is very similar to the actual mark.	*, x , +, |, o, asterisk, star, 10-pointed star, oplus, oplus*, otimes, otimes*, square, square*, triangle, triangle*, diamond, halfdiamond*, halfsquare*, right*, left*, Mercedes star, Mercedes star flipped, halfcircle, halfcircle*, pentagon, pentagon*, cubes. (cubes only work on 3d plots).
colormap	colour scheme to be used in a plot, can be personalized but there are some predefined colormaps	hot, hot2, jet, blackwhite, bluered, cool, greenyellow, redyellow, violet.

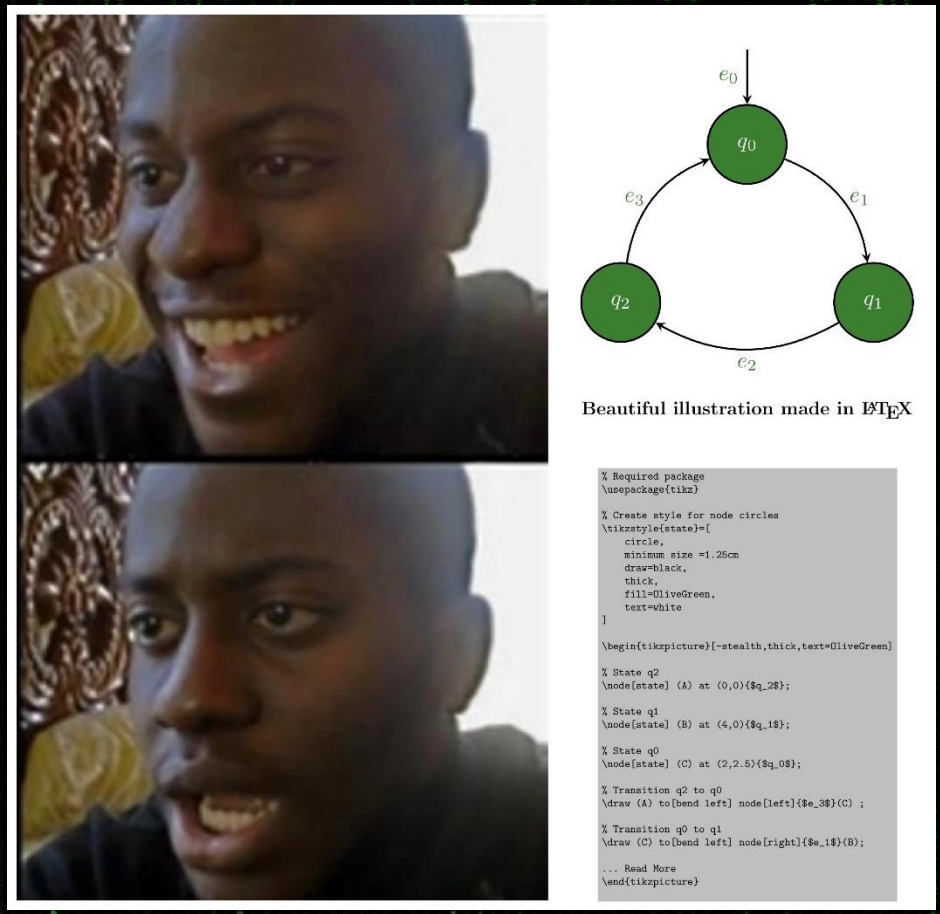
TikZ package

- TikZ is probably the most complex and powerful tool to create graphic elements in LaTeX.
- Starting with a simple example, we will introduce some basic concepts: drawing lines, dots, curves, circles, rectangles etc. Then, we'll focus on how Engineers use it.
- PGF & TikZ are complementary packages. In fact, PGF (Portable Graphics Format) is the basic layer, providing a set of basic commands for producing graphics, and TikZ (TikZ ist kein Zeichenprogramm) is the frontend layer with a special syntax, making the use of PGF easier.



Try it by yourself

```
\documentclass{article}
\usepackage{tikz}

\begin{document}

\begin{tikzpicture}

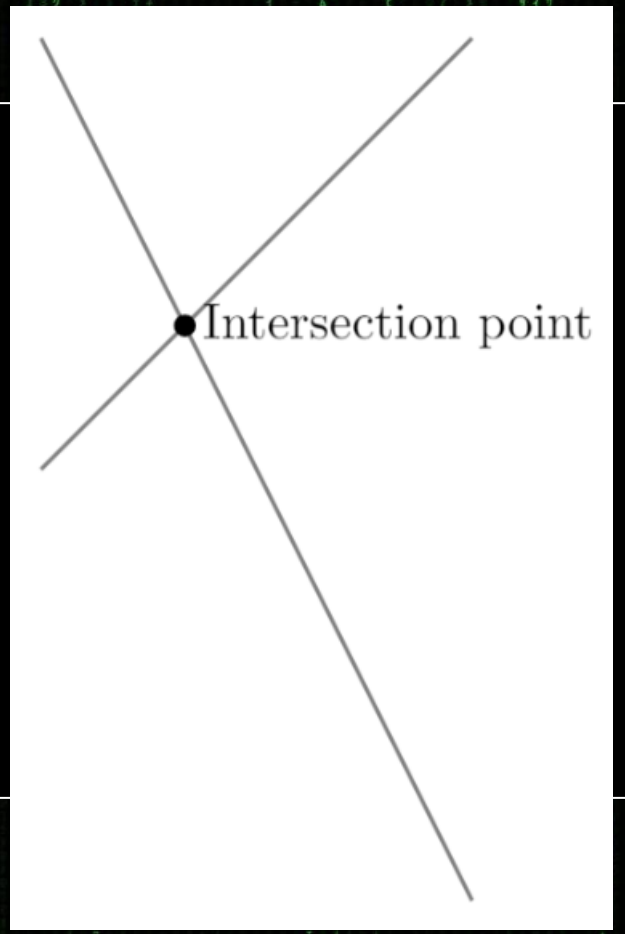
    \draw[gray, thick] (-1,2) -- (2,-4);

    \draw[gray, thick] (-1,-1) -- (2,2);

    \filldraw[black] (0,0) circle (2pt) node[
    anchor=west]{Intersection point};

\end{tikzpicture}

\end{document}
```



Basic elements: points, lines and paths

```
\documentclass{article}
\usepackage{tikz}

\begin{document}

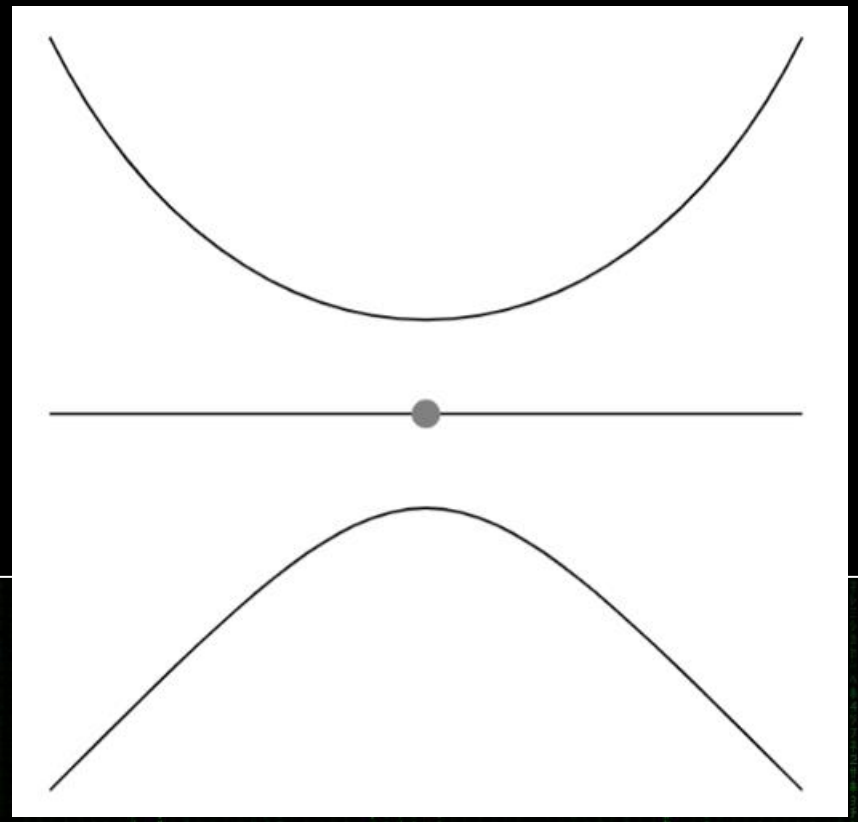
\begin{tikzpicture}

    \draw (-2,0) -- (2,0);
    \filldraw [gray] (0,0) circle (2pt);
    \draw (-2,-2) .. controls (0,0) .. (2,-2);
    \draw (-2,2) .. controls (-1,0) and (1,0) .. (2,2);

\end{tikzpicture}

\end{document}
```

Notice the different curvature!



Basic geometric shapes: ellipses, polygons

```
\documentclass{article}
\usepackage{tikz}

\begin{document}

\begin{tikzpicture}

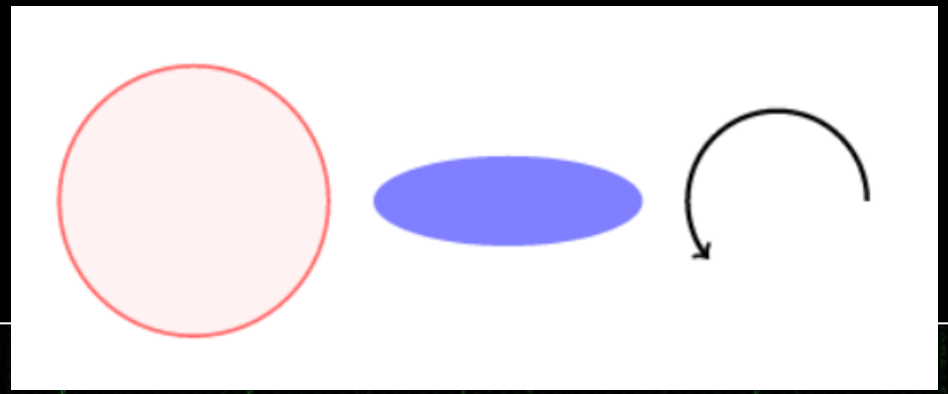
    \filldraw[color=red!60, fill=red!5, very thick](-1,0) circle (1.5);

    \fill[blue!50] (2.5,0) ellipse (1.5 and 0.5);

    \draw[ultra thick, ->] (6.5,0) arc (0:220:1);

\end{tikzpicture}

\end{document}
```



Basic geometric shapes: ellipses, polygons

```
\documentclass{article}
\usepackage{tikz}

\begin{document}

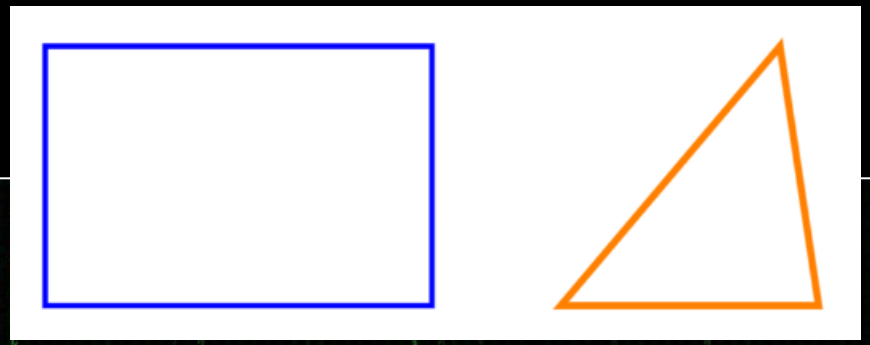
\begin{tikzpicture}

    \draw[blue, very thick] (0,0) rectangle (3,2);

    \draw[orange, ultra thick] (4,0) -- (6,0) -- (5.7,2) -- cycle;

\end{tikzpicture}

\end{document}
```



Diagrams

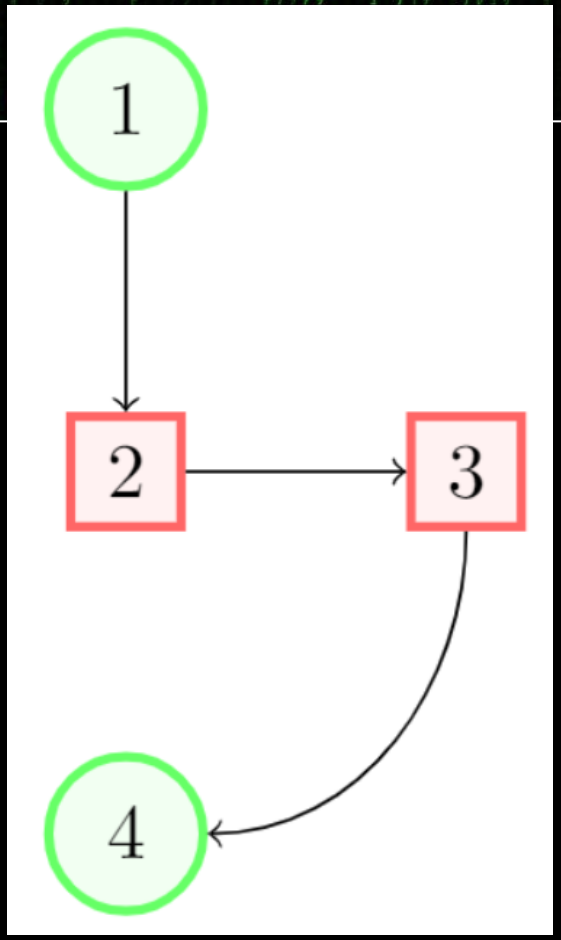
```
\documentclass{article}
\usepackage{tikz}
\usetikzlibrary{positioning}

\begin{document}
     \begin{tikzpicture}[roundnode/.style={
                circle, draw=green!60,
                fill=green!5,
                very thick,
                minimum size=7mm},
                squarednode/.style={rectangle,
                draw=red!60,
                fill=red!5,
                very thick,
                minimum size=5mm},]

          \node[squarednode]   (maintopic)                          {2};
          \node[roundnode]     (uppercircle)   [above=of maintopic] {1};
          \node[squarednode]   (rightsquare)   [right=of maintopic] {3};
          \node[roundnode]     (lowercircle)   [below=of maintopic] {4};

          \draw[->] (uppercircle.south) -- (maintopic.north);
          \draw[->] (maintopic.east) -- (rightsquare.west);
          \draw[->] (rightsquare.south) .. controls +(down:7mm) and +(right:7mm) .. (lowercircle.east);

     \end{tikzpicture}
\end{document}
```



Diagrams

```

   \draw[thick,gray!70!black](6,-2) node {8 neighbourhood rule};

\end{tikzpicture}
```

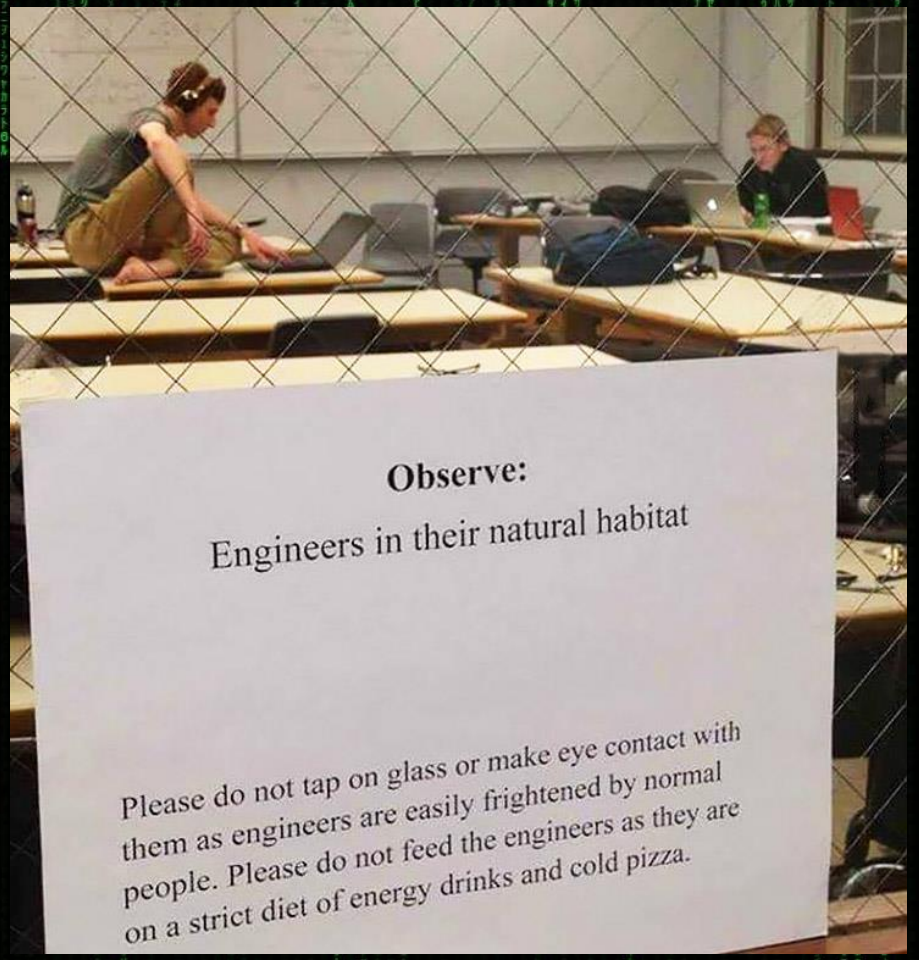
PGF / TikZ & Engineering

The increasing popularity of TikZ suggested to the developers to create dedicated editors, such as:

- Inkscape, MATLAB, Octave and GeoGebra, which can draw vectorial graphics and then export it in TikZ format;
- TikzEdit, Ktikz and Qtikz, which work in a way similar to Overleaf's.

At this stage, why should you learn another coding language if here are many valid editors for drawings and plots?

- Precision;
- Variation;
- Repetition.



Databases – Part 1/3

```
\documentclass { article }
\usepackage { tikz }
\newcommand { \mysize }[1]{ \footnotesize { \textbf {#1}}}
\begin { document }
     \begin { tikzpicture }[blue ,thick , text = blue !60 , scale =0.9 ]
